Introduction:

Bull and Bear markets are powerful market indicators that reflect the overall direction and health of the stock market. A Bull market, marked by rising stock prices, typically signals investor confidence and economic optimism. In contrast, a Bear market, characterized by falling prices, suggests caution and potential economic trouble. These trends are closely watched as they provide insights into where the market is headed and what sentiment is driving it.

Understanding Bull and Bear markets is essential for investment decisions. Investors use these trends to decide the best time to enter or exit the market. In a Bull market, the strategy often leans toward growth investments and capitalizing on rising prices. During a Bear market, investors may shift to safer assets, hold cash, or even explore short-selling opportunities. Recognizing these phases can help reduce risk and improve long-term returns.

Beyond individual investing, these market trends have a broader economic impact. Bull markets often coincide with economic expansion, increased consumer spending, and high business confidence. This encourages companies to invest, expand, and hire. Conversely, Bear markets can trigger cost-cutting, layoffs, and reduced corporate investment. Policymakers also closely follow these trends to guide monetary and fiscal strategies, adjusting interest rates or launching stimulus programs to stabilize the economy when needed.

Executive Summary:

Project Objective:

The objective of this project is to create a dashboard showing financial metric, employee metric and stock information for major companies as well as analyze bull and bear markets to get insights on the overall health and direction of the stock market

Key Insights:

- Over the past decade, the number of unicorn companies and their average total valuation has increased with the peak occurring in 2021.
- ByteDance, SpaceX, SHEIN, Stripe and Checkout have the highest valuation.
- Sequoia Capital China is the primary investor in terms of combined valuation.
- United States has the highest total valuation globally, followed by China and India.
- Fintech Industry is leading other industries in terms of gross valuation.

Immediate Future Actions:

- Consider investing in unicorn companies due to their upward trend.
- Concentrate investment efforts in the United States, China, and India.
- Collaborate with Sequoia Capital China and other top investors.
- Explore investment opportunities in AI, Space, E-commerce, and Fintech industries.

- Monitor ByteDance, SpaceX and other high valuation companies to identify optimal investment window.

About the Dataset:

The open-source dataset is taken from Kaggle. This dataset offers the financial stock information of major company contained in three tables

The profile table shares the geographical, financial and stock related information for the tickers. The price history table gives the dates and prices of ticker. The stock financials includes the cash, debt, revenue, profit margin, net income etc. information of the tickers.

Data Wrangling:

The csv data file was extracted using **Microsoft Excel**. The Data Wrangling operations were performed using **Power Query** in Microsoft Excel. Some of the performed operations were:

- Header Promotion
- Removal of Duplicates
- Filtering Columns
- Correcting Data Types

Data Transformation:

The csv data file was extracted with **Power BI**. The Data Wrangling operations were performed using **Power Query**. Some of the performed operations were:

- Header Promotion
- Filtering Columns
- Correcting Data Types
- Expanding Columns

Data Visualizations and Insights:

For a thorough analysis, three dashboards were created using **Microsoft Power BI**, featuring various visualizations. These interactive dashboards were designed to allow users to personalize their experience. Each visualization was made with a specific objective in mind. The most useful visualizations and dashboards containing the obtained insights are detailed below.

Dashboards:

1. The dashboard Breakdown:

2. Financial Metrics:

3. Employee Metrics:

4. Background:

Analysis Conclusions:

1. META recorded the highest stock price on the NASDAQ, trading at \$339.97, reflecting strong investor confidence in its market positioning and growth potential.
2. Eli Lilly (LLY) led the NYSE listings with the highest stock price at \$597.60, highlighting its strong performance in the pharmaceutical sector.
3. NVIDIA demonstrated the highest Compound Annual Growth Rate (CAGR) over the past 10 years, achieving an impressive 77.57%, indicating exceptional long-term growth.
4. Apple, JPMorgan, and Tesla have shown a consistent increase in Free Cash Flow (FCF) over the years, suggesting strong operational efficiency and cash generation.
5. Microsoft, Meta, Nvidia, and Google experienced a notable dip in financial performance in 2022, following a previously consistent upward trend.
6. JPMorgan and Tesla stand out as the only companies with higher cash reserves than debt, demonstrating robust balance sheet strength and financial stability.

7. While Apple, Eli Lilly, and Tesla exhibit a rising net profit margin, Microsoft maintains the highest net profit margin overall, signaling superior profitability.
8. Tesla has seen a steady increase in outstanding shares, whereas other companies have either maintained or reduced theirs. Apple holds the largest number of outstanding shares in absolute terms.
9. Amazon employs the largest workforce among the companies analyzed, underscoring its operational scale.
10. Meta leads in sales per employee, indicating high workforce productivity and efficient revenue generation.
11. Tesla added the most employees, while Amazon underwent the largest workforce reduction, suggesting divergent strategic directions in workforce management.
12. In terms of executive compensation, Google's CEO received the highest remuneration, followed by Apple and Microsoft, reflecting their leadership valuation.
13. Tesla and Apple have demonstrated a steady upward trend in employee growth, reinforcing their long-term expansion strategies.

Considerations to keep in mind:

1. The dataset is not inclusive of all the details regarding all the companies include. As a result, the accuracy of this information is confined to the scope of the provided dataset.
2. Apart from the discussed metrics there are many other metrics that effect the bull and bear stock company.

Recommendations:

1. Prioritize NVIDIA, Tesla, and Meta for long-term growth investment based on strong CAGR and stock performance.
2. Consider Apple, Microsoft, and JPMorgan for stable returns due to strong free cash flow and profitability.
3. Exercise caution with Microsoft, Meta, Nvidia, and Google, which showed a dip in 2022 after prior consistent growth.
4. Companies like Amazon should optimize workforce efficiency and review productivity due to high employee count and recent reductions.
5. Meta's high sales per employee serves as a benchmark for improving organizational efficiency.
6. Tesla should manage its increasing outstanding shares to prevent shareholder dilution.
7. Companies with stable or declining outstanding shares may continue leveraging share buyback strategies.
8. JPMorgan and Tesla should capitalize on strong cash positions and low debt to invest in growth, innovation, or shareholder returns.
9. Align CEO compensation with long-term value creation, especially for firms like Google, Apple, and Microsoft.

10. Tesla and Apple should maintain their momentum in talent acquisition while ensuring it aligns with long-term strategic growth.
11. Companies reducing workforce should focus on upskilling, automation, and retaining high-performing employees.
